JARELL TAMONTE

Junior Data Scientist

+63 938 456 5033 | jarelltamonte@gmail.com | in/jarell-tamonté
jarelltamonte | Quezon City, Philippines

Professional Summary

Computer Science student graduating in October 2027 with hands-on experience building and evaluating classification and regression models in Python. Certified in Python, SQL, and Power BI. Led a team in building an embedding-based learner-mentor matching app as a thesis project. Seeking a junior data role where I can turn data into practical decisions.

Education

Bachelor of Computer Science | CIIT — *Quezon City, NCR*
Dean's List, 8 semesters — **August 2022 - Expected [October 2027]**
Relevant Coursework: Machine Learning, Data Mining, Data Science, Business Intelligence, Probability and Statistics

Mobile App and Web Development Track | STI College of Laoag — *Laoag City, Ilocos Norte*
Class Salutatorian — **September 2020 - June 2022**

Technical Skills

Languages: Python (pandas, NumPy, scikit-learn, statsmodels, PyTorch), SQL (joins, window functions, CTEs)
Tools: Excel, Power BI, Git, Jupyter, Streamlit, Docker (basic)
Methods: Regression, tree-based models, A/B testing, feature engineering, cross-validation, time series

Projects

PalTuro: Mobile App for Filipino Cultural Skill Exchange | Flutter, Supabase, NVIDIA NIM — **May - November 2026**

- Led a team of 3 in building a Flutter mobile app that matches learners and mentors, using pre-trained NVIDIA Llama Nemotron embedding and reranking models (no fine-tuning) in a two-stage retrieval and reranking pipeline.
- Designed a reciprocal scoring method (harmonic mean of both directions) and surveyed 93 respondents to set matching criteria; planning a 60-tester evaluation using Spearman correlation.

Crop Selection from Soil Conditions | Python, scikit-learn — **December 2025**

- Trained and compared four single-feature multinomial logistic regression models (N, P, K, pH) to classify 22 crop types from 2,200 soil samples, using a 70/30 train-test split.
- Identified potassium as the most predictive soil measure (29.5% test accuracy vs. 4.5% random baseline, about 6.5x better), showing which single test a budget-constrained farmer should prioritize.

Predicting Movie Rental Duration | Python, scikit-learn — **November 2025**

- Engineered the rental-duration target and special-feature flags from raw date and text fields, then compared Lasso-selected linear regression with a random forest on a DVD rental dataset.
- Tuned a random forest with randomized search and 5-fold cross-validation, reaching a test MSE of 2.23 (about 1.5 days of average error) against the company's target of 3 or less.

Certifications

- **Python Data Associate** | DataCamp — 2026
- **SQL Associate** | DataCamp — 2026
- **Data Analyst Associate in Power BI** | DataCamp — 2026
- **Associate Data Scientist in Python** | DataCamp — 2025
